

## **Danube eMOB Strategy**

The eMOB Strategy, developed based on eGUTS Standards and stakeholders input, will overcome regional challenges for sustainable regional and local mobility by joint vision as well as set of short, mid-term and long-term measures for implementing e-transport systems. Strategy will encompass affordable access for electric vehicles to reduce barriers and attract e-vehicle preference

The eMOB Strategy will be verified with stakeholders and promoted on regional level through Regional Stakeholders Platforms as well as on EU level via conferences, workshops and publications. eMOB Strategy and its improved and coordinate application eMOB APP will be implemented not only in participating regions but in whole Danube region or even broader, as one of the main outputs of the project.
