

## **eGUTS APP**

Developed, tested and published will be the eGUTS mobility platform, functionally designed on findings from feasibility study. eGUTS platform will consist of frontend web portal, from where the content administration will be provided, server application and from user smartphone app providing multi-language mobility info and educational contents with emphasis on e-mobility in the DTR.

The business model of eGUTS platform, selected by partners, will have the elements that will raise the interest of different stakeholders to participate, prepare standardized information in national and English language on the city level. The information will be processed and published on the eGUTS platform.

The eGUTS platform will be used and generated by general public, e-mobility enthusiasts, NGO's, experts, service providers and city administrations in DTB area to sensitize general public about the e-mobility and to provide them with knowledge and tools related to e-mobility.
